

HPD UNIQUE IDENTIFIER: 6863126986752

CLASSIFICATION: 12 36 40 Stone Countertops

PRODUCT DESCRIPTION: Caesarstone Ltd. proudly produces premium engineered surfaces that combine timeless beauty with outstanding durability. Our surfaces are designed for both residential and commercial applications, including countertops, vanities, and other interior solutions. By marrying aesthetics with exceptional performance, Caesarstone enables you to bring your design visions to life. The introduction of Caesarstone® Crystalline Silica-Free (CSF) Surfaces represents a significant step forward in the industry. These surfaces are designed to reduce the crystalline silica content traditionally found in engineered stone, enhancing the safety of fabricators and installers. Available in a wide range of colors and designs, Caesarstone CSF Surfaces embody our commitment to safety, innovation, and style, enabling you to create inspiring and responsible spaces without compromise.

This section lists contents in a product based on specific threshold(s) and reports detailed health information including hazards. This HPD uses the inventory method indicated above, which is one of three possible methods:

- Basic Inventory method with Product-level threshold.
- Nested Material Inventory method with Product-level threshold
- Nested Material Inventory method with individual Material-level thresholds

Definitions and requirements for the three inventory methods and requirements for each data field can be found in the HPD Open Standard version 2.3, available on the HPDC website at: www.hpd-collaborative.org/hpd-2-3-standard

CAESARSTONE® MINERAL CRYSTALLINE SILICA FREE SURFACES

PRODUCT THRESHOLD: 1000 ppm

RESIDUALS AND IMPURITIES EVALUATION COMPLETED: Partially

RESIDUALS AND IMPURITIES NOTES: Residuals and Impurities were “Considered”, as outlined in Emerging Best Practices. No residuals or impurities are expected to be present at or above the Content Inventory Threshold indicated that have a GS score of BM-1, LT-1, LT-P1 or NoGS that are not otherwise disclosed as intentionally added ingredients (Quartz/Silica) or as integral components of intentionally added ingredients (Feldspar), based on information provided in supplier documentation and as predicted by process chemistry (Pharos CML).

OTHER PRODUCT NOTES: Percent by weight of substances given as ranges to account for the wide variety of aggregates and colors available. A lower value of 0% indicates that a substance is not always used in every surface formulation.

INGREDIENT DESCRIPTION: Recycled glass

ANALYTICAL TESTING: Information provided by supplier.

BATCH VARIATION: No, Particle size distribution, shade, impurity

COUNTRY OF ORIGIN: Spain and Israel

MATERIAL CONTENT NOTES: From supplier: All glass waste we receive is sorted, cleaned and treated with the best available technologies for glass recycling process. In the first phase of the treatment, all the impurities are extracted from the input flow, such as plastic packaging, lids, corks, stones, ceramic components, paper, etc. The metal elements are automatically extracted using permanent magnets and Foucault based machines. Then the glass is sieved according to its grain size using various sieve machines (screenings). Several optical system sensors automatically sort and remove the foreign objects such as ceramic elements and stones from the glass flow. Because the technology of the glass sorting machines is constantly progressing, we actively cooperate with the leading companies of artificial vision devices, adapting our machinery to use the best techniques available at all times. The fine glass is free from contaminants and is of the highest quality in all aspects: purity, size distribution, color and clarity.

The Health Product Declaration (HPD) Open Standard provides for the disclosure of product contents and potential associated human and environmental health hazards. Hazard associations are based on the HPD Priority Hazard Lists, the GreenScreen List Translator™, and when available, full GreenScreen® assessments. The HPD Open Standard v2.1 is not:

- a method for the assessment of exposure or risk associated with product handling or use,*
- a method for assessing potential health impacts of: (i) substances used or created during the manufacturing process or (ii) substances created after the product is delivered for end use.*

Information about life cycle, exposure and/or risk assessments performed on the product may be reported by the manufacturer in appropriate Notes sections, and/or, where applicable, in the Certifications section.

The HPD Open Standard was created and is supported by the Health Product Declaration Collaborative (the HPD Collaborative), a customer-led organization composed of stakeholders throughout the building industry that is committed to the continuous improvement of building products through transparency, openness, and innovation throughout the product supply chain.
