INVENTORY AND SCREENING NOTES:

In compliance with HPDC Special Conditions Policy for Alloy elements, the listed alloy is considered the ingredient in this product. Metal alloys have different intrinsic characteristics, including health and environmental hazards, than their alloying elements. The aluminum alloy does not have a CASRN, however it does have an aluminum alloy number (UNSA96061). All other CASRN have been identified. According to Pharos, UNS A96061 has a "NoGS" (No GreenScreen Score) and no identified hazards. This means it does not have a specific GreenScreen Benchmark score assigned, indicating it's not subject to the detailed hazard assessment process. Aluminum Alloying elements GreenScreen Score according to Pharos - Aluminum (Al) 7429-90-5: BM-1, Magnesium, Mg) 7439-95-4: LT-UNK, Silicon (Si) 7440-21-3: LT-UNK, Copper (Cu) 7440-50-8: LTP1, and Chromium (Cr) 7440-47-3: LT-P1. Residuals / impurities are quantitatively measured and are displayed in the HPD when greater than 100ppm. HPDC Best Practices for Considering Residuals and Impurities was followed.

PRODUCT THRESHOLD: 100 ppm	RESIDUALS AND IMPURITIES EVALUATION COMPLETED: Yes
RESIDUALS AND IMPURITIES NOTES: Residuals / impurities in select raw materials are quantitatively measured and are displayed in the HPD when greater than 100ppm. No Residuals or Impurities are expected to be present at or above Content Inventory Threshold that return a GreenScreen score of BM-1, LT-1, LT-P1 or NoGS. OTHER PRODUCT NOTES: Ingredient ranges are provided. Ranges are provided to account for formula variation, alternate suppliers, and materials, or colors. For example, finished product color dictates the pigments required, therefore a range is provided for the pigments used in this product.

GreenScreen Benchmark scores sometimes also carry subscripts, which provide more context for how the score was determined. These are DG (data gap), TP (transformation product), and CoHC (chemical of high concern). The Health Product Declaration (HPD) Open Standard provides for the disclosure of product contents and potential associated human and environmental health hazards. Hazard associations are based on the HPD Priority Hazard Lists, the GreenScreen List Translator™, and when available, full GreenScreen® assessments. The HPD Open Standard v2.1 is not:

- a method for the assessment of exposure or risk associated with product handling or use,*
- a method for assessing potential health impacts of: (i) substances used or created during the manufacturing process or (ii) substances created after the product is delivered for end use.*

Information about life cycle, exposure and/or risk assessments performed on the product may be reported by the manufacturer in appropriate Notes sections, and/or, where applicable, in the Certifications section.

The HPD Open Standard was created and is supported by the Health Product Declaration Collaborative (the HPD Collaborative), a customer-led organization composed of stakeholders throughout the building industry that is committed to the continuous improvement of building products through transparency, openness, and innovation throughout the product supply chain.
